

## How do I set up ?

**Step 1:** Unplug the power to your Cable/DSL Internet modem.

**Step 2:** Position your router close to your modem and a computer for the initial setup process. Once your router is set up, place the router in an open area of your intended work area for better wireless coverage.

**Step 3:** Unplug the Ethernet cable from your modem (or existing router if upgrading) that is connected to your computer and plug it in to one of the ports labelled LAN on the back of your DIR-880L.

**Step 4:** Plug one end of the included Ethernet cable that came with your router into the yellow port labeled INTERNET on the back of the router. Plug the other end of this cable into the Ethernet port on your modem.

Note: This unit is to be used with power supply model WA-36C12R.

**Step 5:** Reconnect the power adapter to your cable or DSL broadband modem and wait for two minutes.

**Step 6:** Connect the supplied power adapter to the power receptor on the back of the router and then plug it into a power outlet or surge protector. Press the power button and verify that the power LED is lit. Allow 1 minute for the router to boot up.

Note: This unit is to be used with power supply model WA-36C12R.

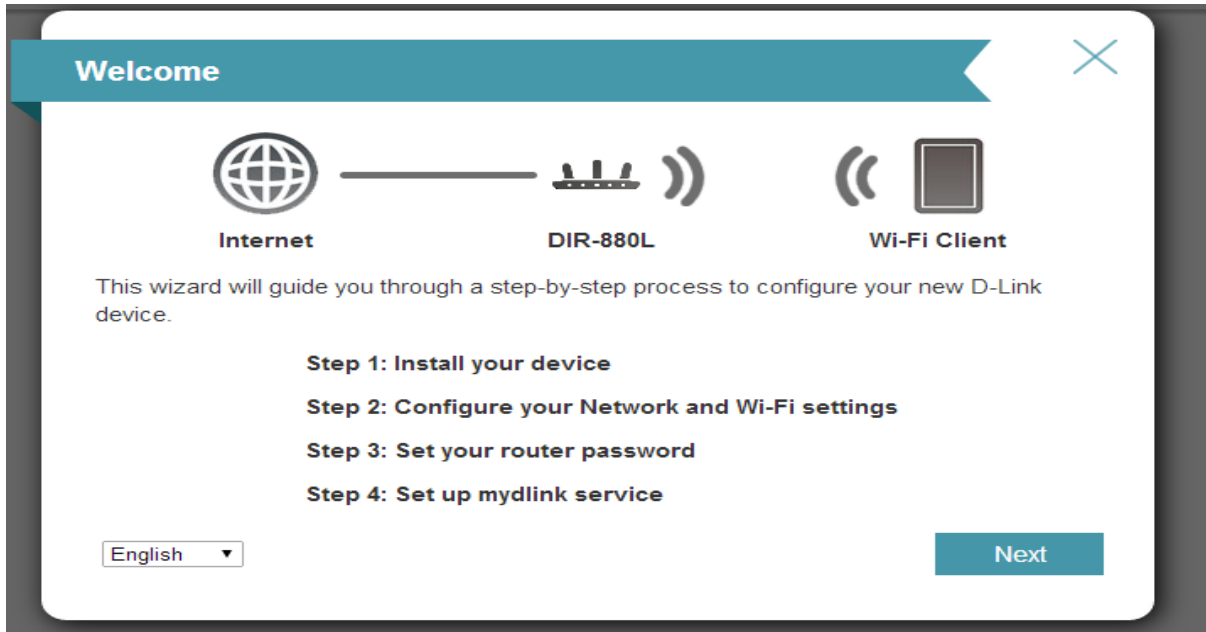

**Step 6:** Open an Internet browser (such as Internet Explorer) and enter <http://dlinkrouter.local> or <http://192.168.0.1> into the address bar.

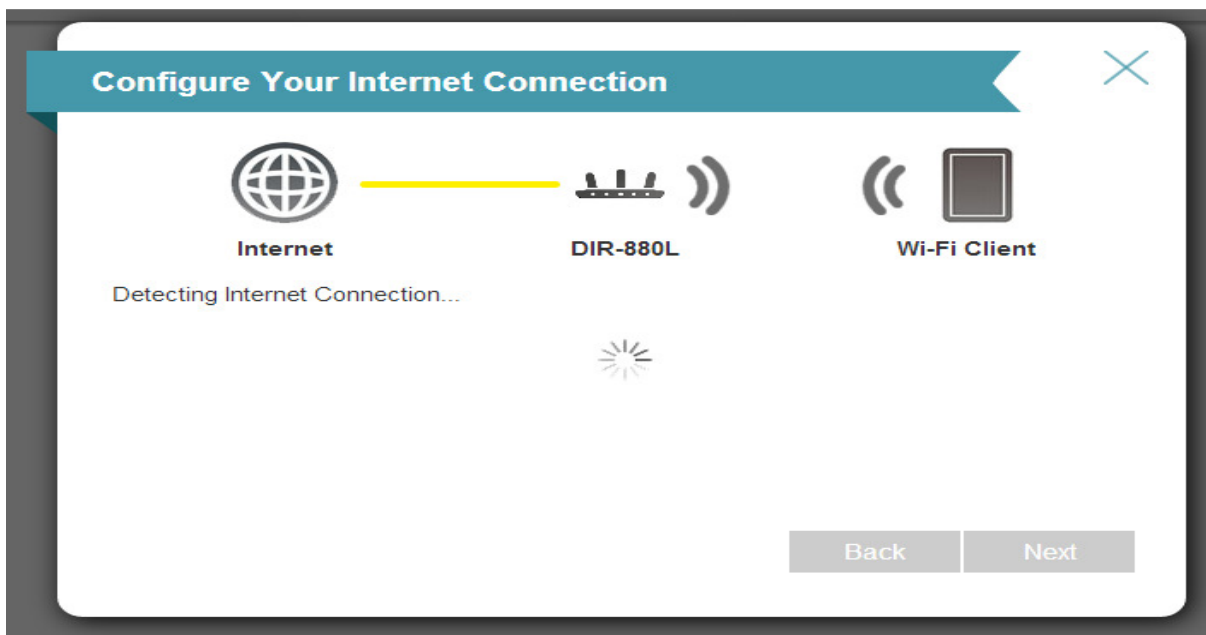

**Step 7:** If this is your first time logging in to the router, the Setup Wizard will start automatically.

This wizard will guide you through a step-by-step process to configure your new D-Link router and connect to the Internet. You can select a different language using the drop-down menu in the bottom left-hand corner of the window. Click **Next** to continue.

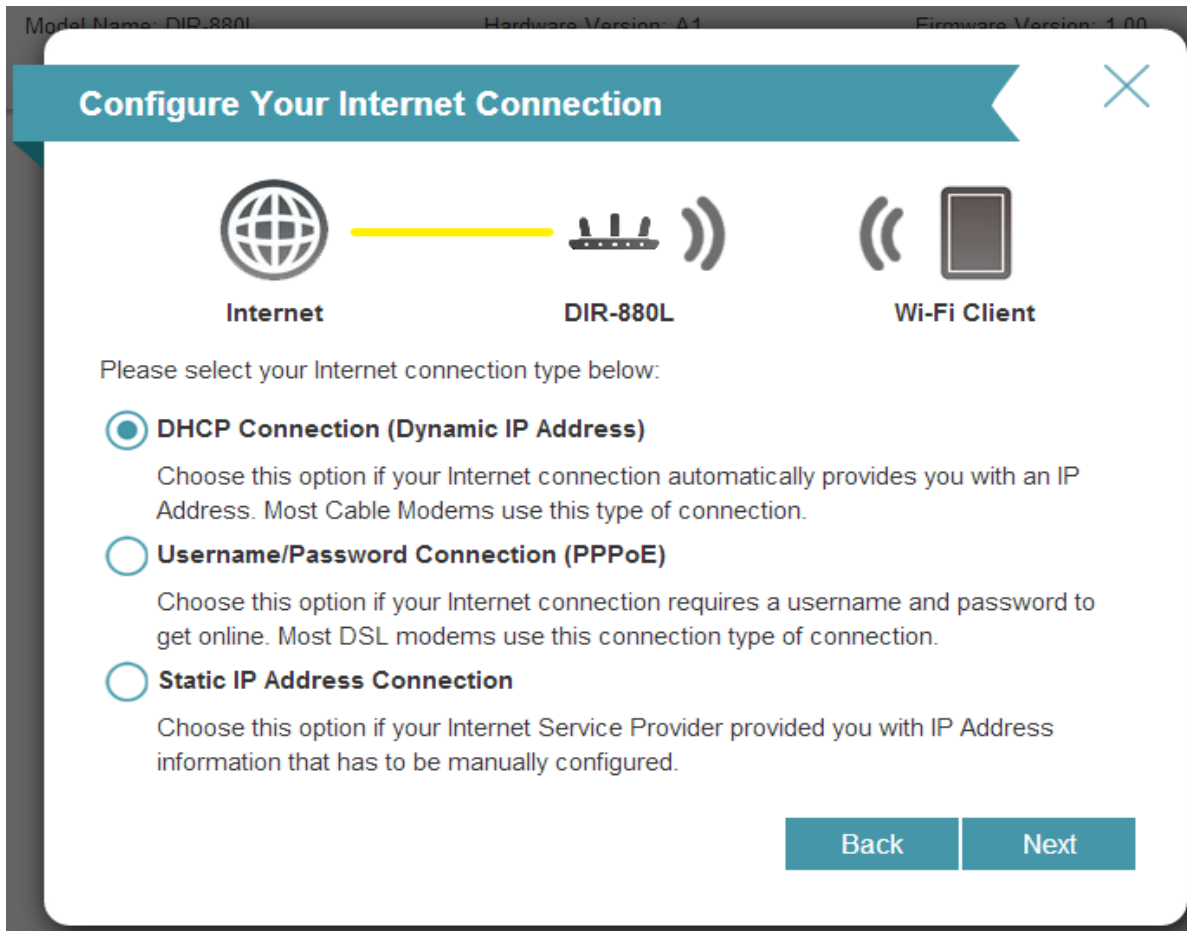

Wait while your router detects your Internet connection type. After the router detects your Internet connection, you may need to enter information such as a username and password. This information should be provided by the company that provides your Internet, also known as an Internet Service Provider (ISP).

**Step 8:** If the router does not detect a valid Internet connection, a list of connection types to choose from will be displayed. Select your Internet connection type (this information can be obtained from your Internet service provider) and click **Next** to continue.

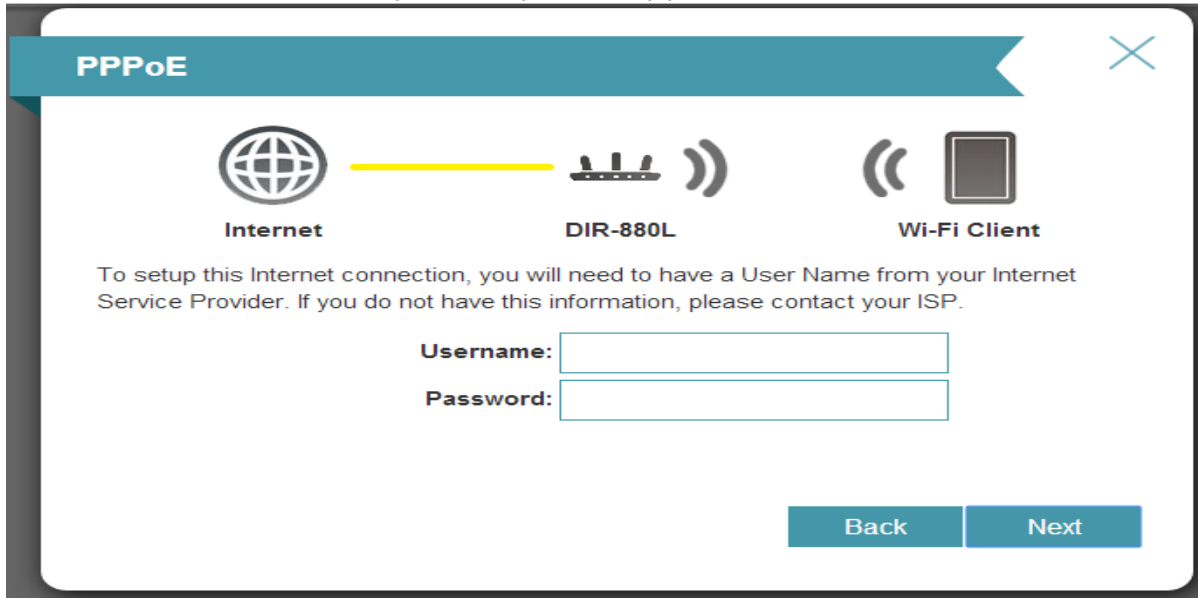

Select your Internet connection type: **DHCP Connection (Dynamic IP Address)** or **Username/Password Connection (PPPoE)**, or **Static IP Address Connection**.

**DHCP Connection (Dynamic IP Address)** – This type of connection is most commonly used for cable Internet services. You will most likely not need to provide any extra information if you use this connection type.

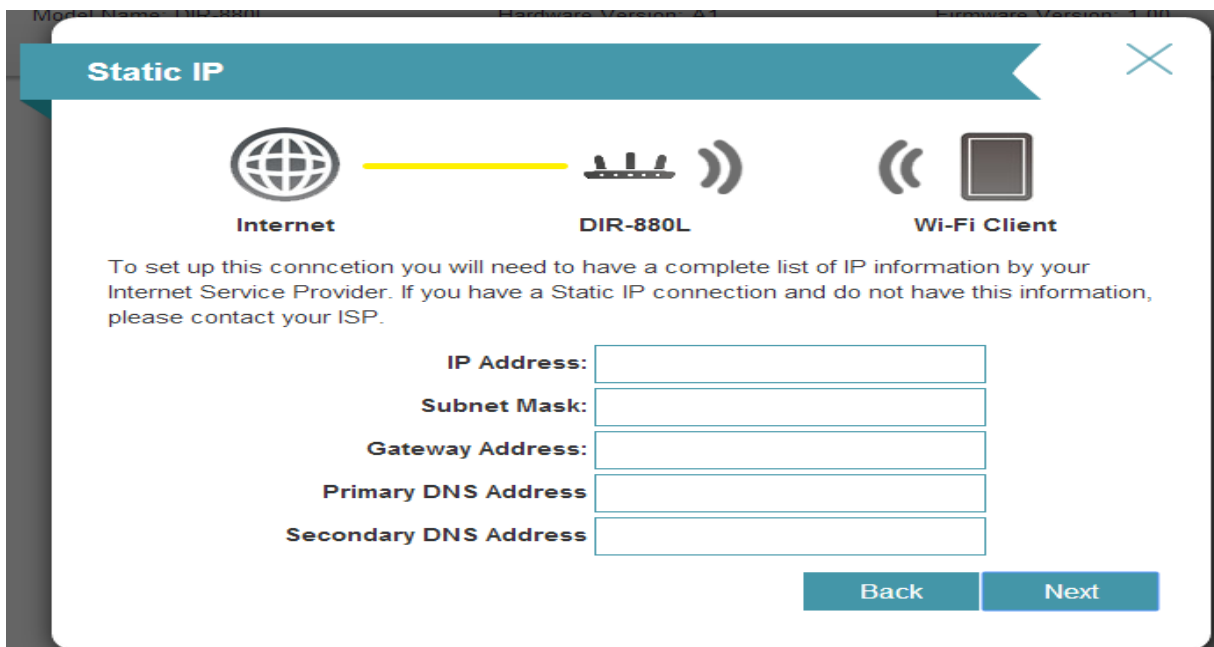

**Username/Password Connection (PPPoE)** – This type of connection is most commonly used for DSL Internet connections. You will most likely need to provide some additional information before you can connect to the Internet:

- Username - Your Internet username (provided by your Internet Service Provider)
- Password - Your Internet password (provided by your Internet Service Provider)

The screenshot shows the 'PPPoE' configuration screen. At the top, there is a teal header with the text 'PPPoE' and a close button (X). Below the header, there is a diagram showing 'Internet' (globe icon) connected to 'DIR-880L' (router icon) which is connected to 'Wi-Fi Client' (Wi-Fi and smartphone icons). Below the diagram, there is a text block: 'To setup this Internet connection, you will need to have a User Name from your Internet Service Provider. If you do not have this information, please contact your ISP.' Below this text are two input fields: 'Username:' and 'Password:'. At the bottom right, there are two buttons: 'Back' and 'Next'.

**Static IP Address Connection** - If the router detected or you selected this type of connection, enter the **IP Address, Subnet Mask, Gateway Address, Primary DNS Address, and Secondary DNS Address** supplied by your ISP. Click **Next** to continue.

The screenshot shows the 'Static IP' configuration screen. At the top, there is a teal header with the text 'Static IP' and a close button (X). Below the header, there is a diagram showing 'Internet' (globe icon) connected to 'DIR-880L' (router icon) which is connected to 'Wi-Fi Client' (Wi-Fi and smartphone icons). Below the diagram, there is a text block: 'To set up this connection you will need to have a complete list of IP information by your Internet Service Provider. If you have a Static IP connection and do not have this information, please contact your ISP.' Below this text are five input fields: 'IP Address:', 'Subnet Mask:', 'Gateway Address:', 'Primary DNS Address', and 'Secondary DNS Address'. At the bottom right, there are two buttons: 'Back' and 'Next'.

**Step 9:** Enter the required information, and click **Next** to continue.

**Step 10:** For both the 2.4 GHz and 5 GHz wireless frequencies, create a name (SSID) for your Wi-Fi networks. Each Wi-Fi network will also need a password of at least 8 characters. Your wireless clients will need to have this password to be able to connect to your wireless network. Click **Next** to continue.

(Password suggestion: It is suggested that you choose a password that is easy for you to remember but, difficult for others to guess. Strong passwords should include a combination of letters and numbers).

**Wi-Fi Settings**

Internet — DIR-880L — Wi-Fi Client

To setup a Wi-Fi network you will need to give your Wi-Fi network a name(SSID) and password.

**2.4GHz Wi-Fi Network Name:**

**5GHz Wi-Fi Network Name:**

The Wi-Fi Network Name is up to 32 characters. You will need to join your Wi-Fi network using this Network Name (SSID).

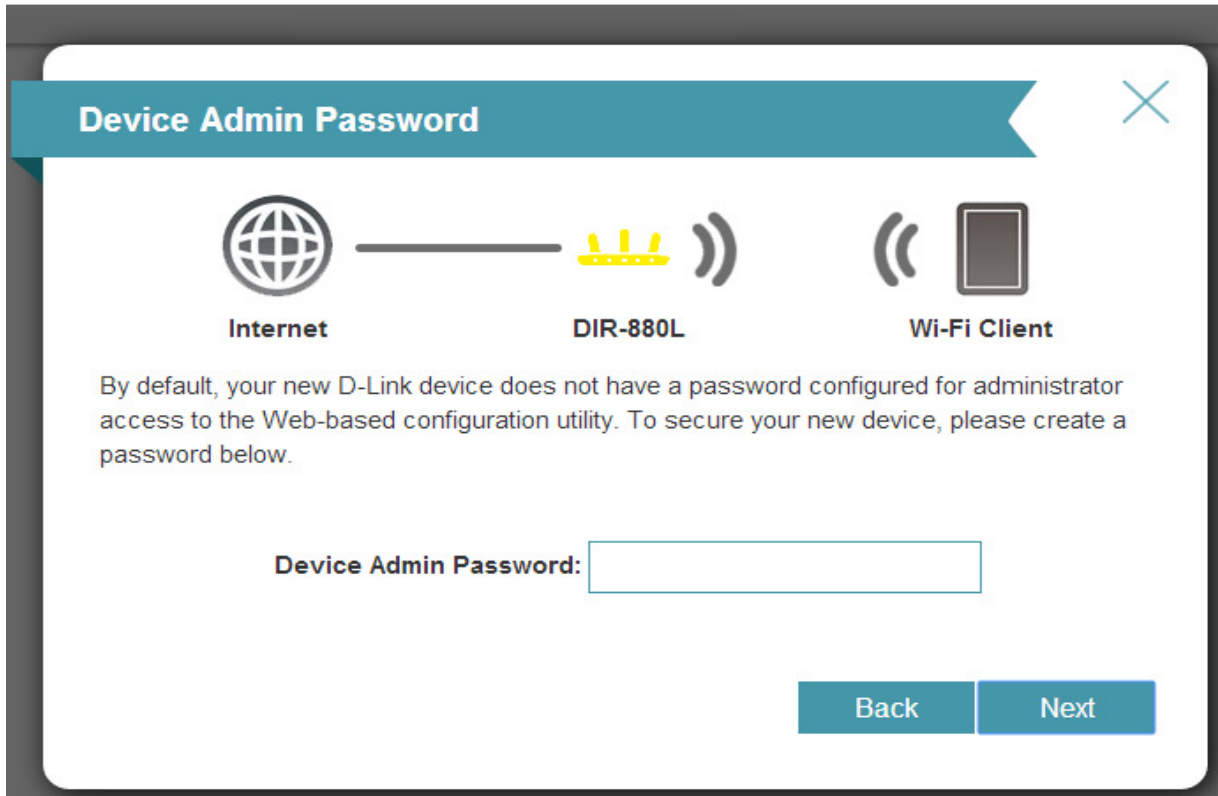

**2.4GHz Wi-Fi Password:**

**5GHz Wi-Fi Password:**

The password must contain at least 8 characters. You will need to join your Wi-Fi network using this password.

**Back** **Next**

**Step 11:** In order to further secure your router, create a password to access the router's web-based configuration interface. This should be different from the password to connect to the Wi-Fi network. Enter your password in the **Device Admin Password** field provided, Click **Next** to continue.

**Step 12:** The Summary window will display your settings. Click **Next** if you are satisfied, or click **Back** to make changes.

**mydlink™ Cloud Services registration:**

With mydlink Cloud Services you can remotely manage, control, and monitor your home network from anywhere using the mydlink mobile apps or mydlink web portal. You can check up on your network's Internet activity, and see what devices are connected to your network. You can also use the mydlink SharePort app to remotely access content on a USB drive connected to your router.

You may choose **Next** to register this device with mydlink for free. Or you may choose **Skip** to register later.

To get started with mydlink Cloud Services, you are required to have a mydlink account, and need to register this router to your mydlink account. Select **Yes, I have a mydlink account** if you have previously registered a mydlink account; or select **No, I want to register and login with a new mydlink account** if you would like to create a new mydlink account.

**mydlink Registration**

This device is mydlink-enabled, which allows you to remotely monitor and manage your network through the mydlink.com website, or through the mydlink mobile app. You can register this device with your existing mydlink account. If you do not have one, you can create one now.

**Do you have an existing mydlink account??**

Yes, I have a mydlink account.

No, I want to create a new mydlink account.

[Skip](#) [Next](#)

a) If you selected “Yes, I have a mydlink account,” enter your existing mydlink account name and password. Then click **Login**.

**mydlink Registration**

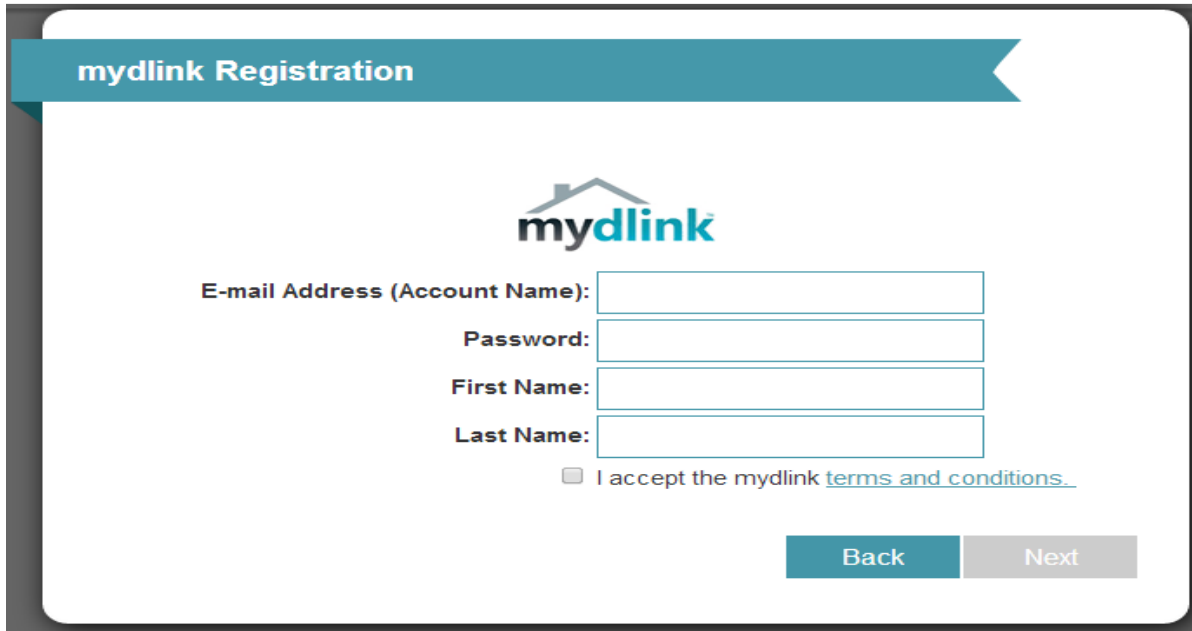

**E-mail Address (Account Name):**

**Password:**

[Back](#) [Next](#)

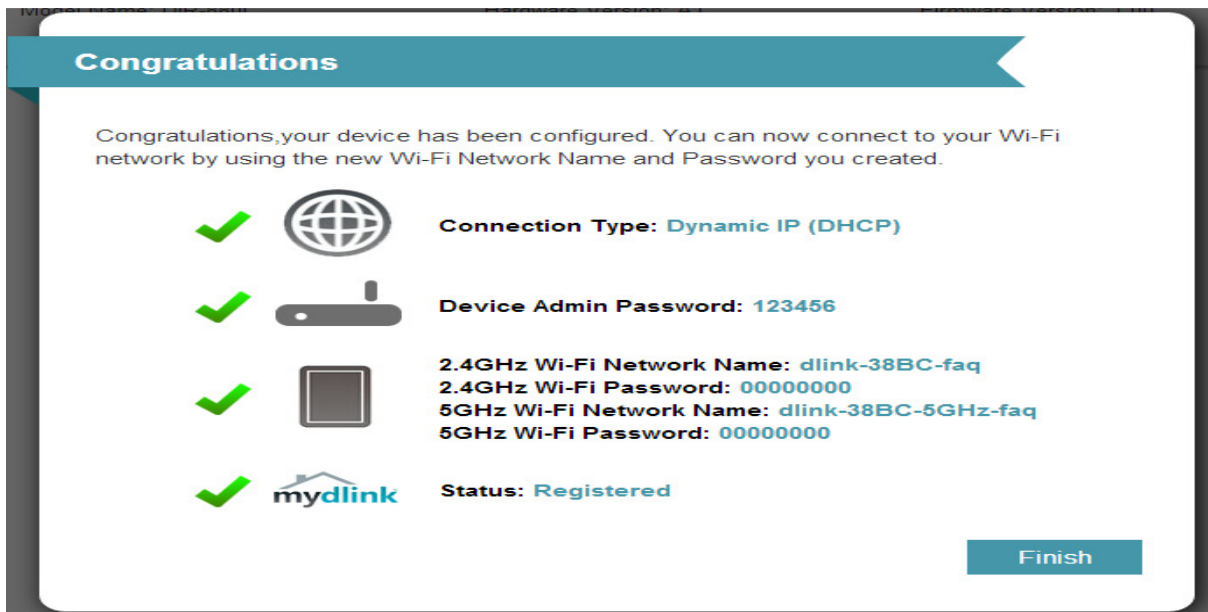

b) If you selected “No, I want to register and login with a new mydlink account,” fill in the required information and check the **I Accept the mydlink terms and conditions** box in order to create a new mydlink account.

Note: Your mydlink password is the password to log in to the mydlink web portal and mydlink mobile apps. This is NOT the same as your router’s login information or wireless security password.

The image shows a registration form titled "mydlink Registration". At the top center is the mydlink logo. Below it are four input fields: "E-mail Address (Account Name)", "Password", "First Name", and "Last Name". Below the fields is a checkbox labeled "I accept the mydlink terms and conditions." At the bottom right are two buttons: "Back" and "Next".

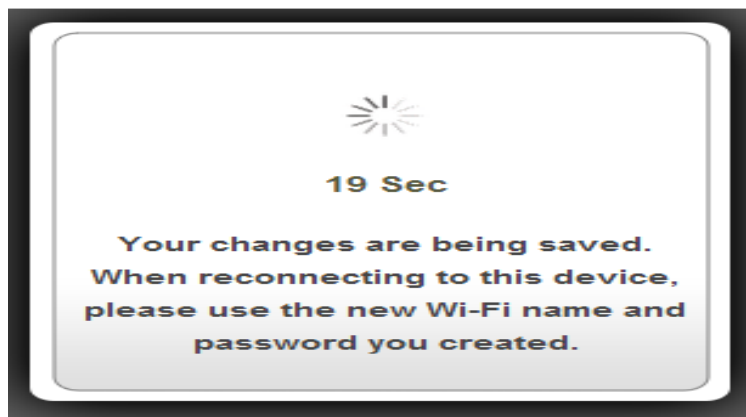

**Step 13:** At the end of the wizard, you will be presented with a final summary of your settings. Click **Finish** to close the wizard.

The image shows a "Congratulations" screen. It features a teal header with the word "Congratulations". Below the header is a paragraph: "Congratulations, your device has been configured. You can now connect to your Wi-Fi network by using the new Wi-Fi Network Name and Password you created." There are four rows of configuration details, each with a green checkmark icon on the left:

- Connection Type: **Dynamic IP (DHCP)** (with a globe icon)
- Device Admin Password: **123456** (with a router icon)
- 2.4GHz Wi-Fi Network Name: **dlink-38BC-faq**  
2.4GHz Wi-Fi Password: **00000000**  
5GHz Wi-Fi Network Name: **dlink-38BC-5GHz-faq**  
5GHz Wi-Fi Password: **00000000** (with a smartphone icon)
- Status: **Registered** (with the mydlink logo)

A "Finish" button is located at the bottom right of the screen.

Once the changes have been saved, you will return to the main page of the router's configuration interface. From here you can use the on-screen network map to view the current status of devices and components on your network.
